

HarborView CLO 2026-1

Synthetic Transaction & Offering Summary | Fictional data for RAG evaluation

Important notice. This document describes a wholly synthetic collateralized loan obligation transaction. All entities, names, dates, identifiers, ratings, amounts and portfolio statistics are fictional and are not intended to describe any actual issuer, manager, bank, security or transaction. The document is designed to resemble transaction documentation and should not be treated as an offering document, investment recommendation or legal opinion.

1. Transaction Overview

HarborView CLO 2026-1 (the “**Transaction**”) is a U.S.-dollar, broadly syndicated loan CLO issued through **HarborView CLO Funding 2026-1, Ltd.** (the “**Issuer**”) and **HarborView CLO Funding 2026-1, LLC** (the “**Co-Issuer**”). The Transaction is intended to acquire a diversified portfolio of primarily senior secured corporate loans. The structure provides a 24-month reinvestment period followed by a sequential amortization period, subject to permitted sales and substitutions.

Item	Synthetic transaction term
Transaction type	Cash-flow CLO; broadly syndicated loan collateral
Closing date	September 18, 2026
Effective Date	November 5, 2026
Currency	U.S. dollars
Target / initial collateral balance	\$500,000,000
Initial capitalization	\$500,000,000 notes and \$26,000,000 subordinated/equity interests
Legal final maturity	July 20, 2039
Non-call period	Through September 20, 2027
Reinvestment period	Through November 20, 2028
Payment frequency	Quarterly
Payment dates	20 February, 20 May, 20 August and 20 November (or next business day)

The Effective Date is the date on which the initial collateral portfolio is deemed to satisfy the applicable closing portfolio conditions. The first regular payment date is February 20, 2027. Interest accrues over quarterly periods ending immediately before each payment date, subject to the applicable business-day convention.

2. Transaction Parties

Role	Fictional party
Issuer	HarborView CLO Funding 2026-1, Ltd.
Co-Issuer	HarborView CLO Funding 2026-1, LLC
Collateral manager	HarborView Asset Management Partners, LLC
Investment adviser	HarborView Credit Advisers, LLC
Trustee / collateral administrator	Granite Harbor Trust Company
Calculation agent	Granite Harbor Trust Company
Paying agent	Granite Harbor Trust Company
Custodian	Northlake Custody Services, N.A.
Placement agent / arranger	Bluegate Securities LLC
Rating agencies	Atlas Ratings, Inc.; Meridian Analytics Ratings, Inc.
Issuer counsel	Farnsworth & Pike LLP
Manager counsel	Westbridge Legal Group LLP
Collateral counsel	Ridgewell & Hart LLP

Granite Harbor Trust Company performs trustee, collateral-administration, calculation-agent and paying-agent functions under the Transaction documents. HarborView Asset Management Partners, LLC has discretionary trading authority, subject to the eligibility criteria, concentration limits, coverage tests and other restrictions described below.

3. Capital Structure and Note Terms

Class	Principal	Rating	Coupon / spread	Priority & subordination
Class A-1	\$290.0m	Aaa / AAA	3m Term SOFR + 1.72%	Senior; 42.0% initial subordination
Class A-2	\$55.0m	Aa2 / AA	3m Term SOFR + 2.05%	Senior; 31.0% initial subordination
Class B	\$42.0m	A2 / A	3m Term SOFR + 2.75%	Mezzanine; 22.6% initial subordination
Class C	\$32.0m	Baa3 / BBB-	3m Term SOFR + 3.55%	Mezzanine; 16.2% initial subordination
Class D	\$18.0m	Ba3 / BB-	3m Term SOFR + 5.25%	Junior; 12.6% initial subordination
Class E	\$10.0m	B3 / B-	3m Term SOFR + 7.50%	Junior; 9.0% initial subordination
Subordinated interests	\$26.0m	NR	Residual	First-loss / equity

The rated notes total \$447.0 million. Each class is a limited-recourse obligation of the Issuer, and payments on junior classes are subordinate to payment of amounts due to more senior classes. The Class A-1 and Class A-2 notes constitute the senior secured obligations. The legal final maturity applies to all rated notes and subordinated interests subject to earlier redemption or repayment.

Interest is based on three-month Term SOFR plus the applicable spread, with a 0.00% floor for the reference rate. The notes use an Actual/360 day-count convention. Interest is calculated on the outstanding principal amount for the relevant accrual period. If available interest is insufficient to pay a class in full, unpaid amounts may be deferred or otherwise treated according to the applicable priority of payments; such deferral does not by itself constitute an event of default for the junior classes.

4. Initial Collateral Portfolio

At the Effective Date, the Collateral Pool is expected to contain approximately 170 loans issued by 143 distinct obligors. The portfolio is designed to emphasize first-lien senior secured loans while retaining limited exposure to second-lien and unsecured instruments. The largest obligor represents 1.35% of the initial collateral balance, keeping single-name exposure materially below the applicable concentration cap.

Portfolio metric	Initial value
Collateral principal balance	\$500.0m
Obligors / loans	143 / 170
Average loan size	\$2.94m
Largest obligor	1.35%
Senior secured / first-lien	97.0% / 91.0%
Second-lien / unsecured	6.0% / 3.0%
Floating-rate / fixed-rate	96.0% / 4.0%
Weighted average spread	3.71%
Weighted average coupon	8.06%
Weighted average rating	B2 (mapping equivalent)
Weighted average maturity / life	5.15 years / 3.92 years
Expected recovery	55.5%
Current-pay assets	4.0%
CCC or lower exposure	4.75%
Initial diversity score	58.2

Geographically, approximately 61% of the portfolio is attributable to North American operating businesses, 21% to Western European borrowers, and 18% to other permitted jurisdictions. By industry, the largest exposures are software and technology-enabled services (14.0%), healthcare services (11.5%), business services (10.5%), chemicals and materials (8.5%), and consumer products (8.0%). No single industry may exceed 12.5% of the collateral balance after application of the transaction's industry-adjustment rules.

5. Eligibility and Concentration Standards

An asset generally qualifies as an Eligible Collateral Obligation if it is a corporate loan or permitted debt investment that satisfies the documentation, settlement, currency, maturity, rating and pricing requirements. A permitted loan may be first-lien or second-lien, but second-lien and unsecured positions remain subject to tighter concentration limits. Participation interests are permitted only where the underlying loan and participation arrangement satisfy the specified credit and settlement conditions.

Limit / criterion	HarborView CLO 2026-1 requirement
Permitted currency	USD, EUR, GBP, CAD; non-USD exposure subject to hedge/adjustment rules
Remaining maturity at purchase	Not more than 8.0 years
Minimum price for purchase	70.0% of par, unless an approved discounted-obligation exception applies
Minimum spread / yield test	At least 2.25% spread over the applicable reference rate for floating-rate loans
Defaulted obligations	Generally excluded; permitted only under workout / recovery provisions
Fixed-rate assets	Maximum 8.0% of collateral balance
Second-lien assets	Maximum 10.0%
Unsecured assets	Maximum 5.0%
Single-obligor concentration	Maximum 2.0%
Industry concentration	Maximum 12.5%
CCC / lower assets	Maximum 7.5%; higher exposure triggers test consequences
Current-pay assets	Maximum 7.5%
Long-dated obligations	Maximum 7.0% with more than 7 years remaining
Delayed-draw commitments	Maximum 5.0%

Revolving commitments are permitted if undrawn amounts are treated consistently with the collateral definitions and the manager can fund or sell the position without impairing required coverage. Discounted obligations may be purchased below par only when the manager determines that the purchase is permitted under the discounted-obligation provisions and the transaction's collateral quality tests remain satisfied.

6. Collateral Quality Tests

The manager monitors collateral quality on each monthly reporting date. The principal quality metrics include the Weighted Average Rating Factor (WARF), Weighted Average Spread (WAS), Weighted Average Coupon (WAC), Weighted Average Life (WAL), diversity score and modeled recovery rate. The indicative closing portfolio is calibrated to provide a buffer against the principal quality limits rather than merely satisfy them at the boundary.

Metric	Required / reference level	Initial / current illustrative value	Status
WARF	Maximum 3,050	2,710	Pass
WAS	Minimum 3.40%	3.71%	Pass
WAC	Minimum 7.20%	8.06%	Pass
WAL	Maximum 4.75 years	3.92 years	Pass
Diversity score	Minimum 45	58.2	Pass
Modeled recovery	Minimum 50.0%	55.5%	Pass
CCC / lower	Maximum 7.50%	4.75%	Pass

7. Coverage Tests

The Transaction uses both overcollateralization (OC) and interest coverage (IC) tests to protect senior and mezzanine noteholders. The tests are calculated on each Payment Date using the applicable Collateral Principal Balance and accrued interest proceeds. The illustrative current values below reflect the initial capitalization and are intended solely as synthetic test data.

Test	Required threshold	Initial actual	Cushion	If failed
Class A OC	128.0%	136.7%	+8.7%	Principal redirected to Class A notes; equity distributions restricted
Class B OC	119.0%	124.8%	+5.8%	Principal diverted to senior/mezzanine notes until cured
Class C OC	113.0%	118.2%	+5.2%	Subordinate distributions restricted; sequential pay-down
Class D OC	108.0%	113.1%	+5.1%	Class D/E and equity cash redirected per waterfall
Class A IC	120.0%	145.6%	+25.6%	Interest proceeds applied to cure senior shortfall
Class B IC	115.0%	132.4%	+17.4%	Excess interest redirected away from junior interests

Coverage tests are measured quarterly on Payment Dates, with monthly monitoring available through the collateral report. A failed OC test generally causes principal that would otherwise be available to junior notes or subordinated interests to be applied sequentially to the more senior notes until the test is cured or the applicable distribution condition is otherwise satisfied. A failed IC test similarly redirects available interest proceeds. The exact cure amount is calculated by the Calculation Agent under the governing definitions.

8. Interest Diversion Test

An Interest Diversion Test applies beginning on the first Payment Date after the Effective Date. The required level is 105.0% of the specified diversion benchmark. If the test is below 105.0%, a portion of otherwise distributable interest proceeds attributable to the subordinated interests is diverted into principal proceeds and used to purchase additional Eligible Collateral Obligations or repay the most senior outstanding class, depending on whether the Transaction is within the Reinvestment Period. The diversion ceases when the test is restored above the cure level on a subsequent Measurement Date.

9. Interest and Principal Waterfalls

Interest proceeds are applied in the following order, subject to the detailed priority-of-payments provisions: (1) taxes, registered office and issuer expenses; (2) trustee, calculation, collateral-administration and paying-agent expenses; (3) senior management fees; (4) hedge and other senior counterparty amounts; (5) Class A-1 interest; (6) Class A-2 interest; (7) Class B interest; (8) Class C interest; (9) Class D interest; (10) Class E interest; (11) any required interest-diversion amounts; and (12) remaining subordinated/equity distributions. A coverage-test failure can change the treatment of steps 11 and 12 and may cause amounts otherwise payable to junior interests to be retained or redirected.

Principal proceeds received during the Reinvestment Period may be reinvested in qualifying assets if the purchase satisfies the reinvestment criteria, including collateral quality, concentration and weighted-average-life requirements. After the Reinvestment Period, principal collections are generally applied sequentially to Class A-1, Class A-2, Class B, Class C, Class D and Class E, with residual amounts thereafter available to subordinated interests. Workout proceeds and other special principal collections may be subject to separate provisions.

10. Reinvestment and Trading Mechanics

The Reinvestment Period ends on November 20, 2028. During that period, the manager may sell, purchase, exchange or substitute collateral in the ordinary course, provided that each resulting portfolio satisfies the applicable reinvestment criteria. Sales may be made to manage credit deterioration, take advantage of relative value, cure concentration breaches, or maintain required collateral characteristics. The manager may use sale proceeds and other Principal Proceeds for permitted reinvestments rather than immediate note repayment.

After November 20, 2028, purchases are restricted principally to permitted substitute assets, workouts, amendments and transactions necessary to preserve or improve the collateral portfolio. The manager may not extend the weighted average life beyond the permitted post-reinvestment limits solely to defer amortization. Any substitution must be economically reasonable and satisfy the eligibility and concentration provisions.

11. Redemption, Refinancing and Reset

The notes are subject to a non-call period ending September 20, 2027. Following the non-call period, the subordinated interest holders may direct an optional redemption of all rated notes, subject to applicable notice, minimum redemption amount and payment-of-expenses conditions. A clean-up call may be exercised if the aggregate collateral balance falls below 10% of the original balance. The transaction does not provide a scheduled reset feature, but

the documents permit a refinancing or repricing of one or more classes if the applicable consent thresholds are satisfied.

A refinancing may be effected without unanimous noteholder consent where permitted under the indenture, provided that no non-consenting class is adversely affected except as expressly allowed. Any partial redemption must preserve the stated priority of payment and may require class-specific consent.

12. Fees, Expenses and Manager Compensation

Fee / expense	Synthetic term
Base management fee	0.35% p.a. of Collateral Principal Balance through Reinvestment Period; 0.30% thereafter
Subordinated incentive allocation	Up to 10% of eligible residual distributions above the stated hurdle
Trustee / paying agent	\$85,000 annual base plus transaction expenses
Collateral administration	\$60,000 annual base plus per-report processing fees
Calculation agent	Included in trustee fee schedule, subject to extraordinary-event charges
Rating expenses	At cost; payable from transaction expenses
Legal and professional expenses	At cost, subject to document-defined expense caps and priority
Placement expenses	Paid from initial transaction expenses and not from note interest

Management fees are payable ahead of note interest only to the extent permitted by the waterfall and expense provisions. Extraordinary expenses, including enforcement costs, may receive priority treatment where expressly permitted by the Transaction documents.

13. Manager Powers, Restrictions and Replacement

HarborView Asset Management Partners, LLC may exercise discretionary trading authority over the collateral portfolio, including purchases, sales, amendments, consents, substitutions and restructurings. The manager must act within the investment guidelines and may not knowingly acquire an asset that violates a stated eligibility or concentration limit unless the acquisition is expressly permitted as a cure, workout or other special transaction.

The manager must disclose specified conflicts and maintain procedures intended to allocate investment opportunities fairly among managed accounts. Manager replacement may occur following specified termination events, including material breach that remains uncured, insolvency, certain regulatory events or a vote meeting the applicable replacement threshold. Voting rights of the subordinated interests are subject to the limits applicable to conflicts and extraordinary matters.

14. Events of Default and Remedies

Events of default include failure to pay required amounts on senior notes after any applicable grace period, certain insolvency events affecting the Issuer or Co-Issuer, material breach of specified covenants, and other document-defined events. Upon an event of default, the Trustee may exercise remedies and, where authorized, accelerate the notes. Enforcement proceeds are applied in the order specified by the post-acceleration waterfall rather than by ordinary-period distribution rules.

The Trustee is not required to pursue enforcement unless properly directed and indemnified as required by the governing documents, subject to applicable duties and protections. Noteholders retain class-specific voting rights, but junior holders do not have the same enforcement leverage as senior classes when senior obligations remain outstanding.

15. Voting and Amendments

Ordinary amendments generally require the consent of holders representing more than 50% of the affected voting balance, while extraordinary matters require a higher threshold, typically 75% or, where the rights of a single class are directly altered, a separate class vote. Extraordinary matters include changes to principal or interest payment terms, changes to maturity, reductions in required payments, or material changes to priority.

The subordinated interest holders may have consent rights over certain manager matters and optional redemption decisions. No amendment may be used to circumvent the stated priority of payments or materially impair a class without the consent required by the applicable protected-rights provisions.

16. Reporting and Administration

The Collateral Administrator prepares monthly collateral reports containing asset-level positions, principal balances, ratings, spreads, prices, industry and geographic classifications, and key collateral quality measures. A Payment Date Report is delivered before each quarterly distribution and includes the OC and IC calculations, interest and principal available for distribution, note balances, fees and distributions. The Calculation Agent is responsible for performing the defined mathematical tests and determining compliance with the applicable coverage provisions.

Quarterly investor reporting summarizes portfolio composition, trading activity, defaults, recoveries, cash balances and material amendments. Valuations are based on available market quotations or other permitted valuation methodologies where market quotations are unavailable. The Trustee maintains transaction records and delivers reports to holders in accordance with the reporting calendar.

17. Risk Factors

Credit and default risk. The collateral consists primarily of below-investment-grade corporate obligations and may experience defaults, restructurings and rating migration. Recoveries can be materially below assumptions, particularly in periods of market stress.

Interest-rate and spread risk. The notes and collateral may reference different benchmarks or reset dates. Changes in benchmark levels, loan spreads or hedge economics can affect available cash flow. **Reinvestment and liquidity risk.** There is no assurance that the manager can source replacement assets at attractive spreads or sell deteriorating positions without losses. **Concentration risk.** Limits reduce but do not eliminate exposure to particular obligors, industries or regions.

Counterparty and manager risk. Trustee, custodian, hedge and other counterparties may fail to perform. The Transaction also depends on the manager's trading, valuation and workout decisions. **Structural and subordination risk.** Junior classes and subordinated interests absorb losses before senior notes, and coverage-test failures can materially alter distributions. **Redemption/refinancing risk.** Optional redemption or refinancing can shorten expected note lives.

Regulatory and foreign-currency risk. Changes in law, tax treatment, bank regulation or CLO-market requirements may affect transaction economics. EUR, GBP and CAD assets introduce currency and hedging considerations even though the notes are denominated in U.S. dollars. These risks are not exhaustive.

18. Selected Definitions

Defined term	Meaning for this synthetic Transaction
OC	Overcollateralization ratio comparing the applicable collateral balance with the principal balance of the relevant note classes.
IC	Interest coverage ratio comparing specified interest proceeds with required interest amounts for the relevant classes.
Reinvestment Period	Period from the Effective Date through November 20, 2028 during which qualifying Principal Proceeds may generally be reinvested.
Non-call Period	Period ending September 20, 2027 during which the ordinary optional redemption provisions are restricted.
Effective Date	November 5, 2026, the date on which the initial collateral portfolio is treated as satisfying the stated closing conditions.
Collateral Principal Balance	Principal amount of qualifying collateral determined under the governing collateral definitions.
Adjusted Collateral Principal Balance	Collateral Principal Balance after specified adjustments for discounts, defaults, ratings or other defined items.
Interest Proceeds	Cash and other amounts characterized as interest collections under the transaction documents.
Principal Proceeds	Cash and other amounts characterized as principal collections, including applicable sale proceeds.
CCC Assets	Collateral obligations rated CCC/Caa or lower, subject to the transaction's rating-source and adjustment rules.
Defaulted Obligations	Collateral obligations meeting the defined default criteria, including specified payment or insolvency events.
Coverage Tests	The OC and IC tests applicable to specified note classes on each relevant Measurement Date.
Interest Diversion Test	A test that can redirect subordinated interest into principal proceeds when the required benchmark is not met.
WARF	Weighted Average Rating Factor, an aggregate measure of portfolio credit quality based on assigned rating factors.
WAS	Weighted Average Spread, the weighted average contractual spread of applicable floating-rate collateral.
WAL	Weighted Average Life, the weighted average remaining life of collateral principal under the defined methodology.

19. Transaction Consistency Notes

The \$500.0 million initial collateral balance exceeds the \$447.0 million rated-note capitalization and is supplemented by \$26.0 million of subordinated/equity interests. The initial Class A OC ratio of 136.7% is calculated as \$500.0 million divided by the \$365.0 million aggregate Class A principal amount. The Class B, C and D illustrative OC values are based on the corresponding senior-plus-relevant-class principal balances and are shown to make the test hierarchy explicit. The 24-month reinvestment period begins on November 5, 2026 and ends with the November 20, 2028 payment-date boundary.

All portfolio percentages in this synthetic document are illustrative and intended to be internally coherent rather than representative of any actual market transaction. Where a percentage is expressed as an initial portfolio characteristic and a separate concentration limit is provided, the two values should be interpreted respectively as the opening portfolio and the contractual maximum.

End of synthetic transaction summary. This document is intentionally fictional and is supplied solely for portfolio RAG testing.
