

SUMMIT CLO 2026-2

Transaction Overview

Summit CLO 2026-2 (the **Transaction**) is a fictional U.S.-dollar collateralized loan obligation transaction sponsored through Summit CLO 2026-2, Ltd. and Summit CLO 2026-2, LLC. The transaction is designed around a broadly diversified portfolio of corporate loan obligations and permits active collateral management during a defined reinvestment period.

This document combines transaction terms, portfolio statistics, eligibility rules, operating mechanics and narrative explanations. All names, dates, amounts, ratings and contractual terms are invented.

Transaction identity

The Transaction is intended to acquire a diversified pool of senior secured and other permitted corporate loans. During the reinvestment period, principal proceeds can generally be redeployed into eligible assets rather than immediately used to amortize the notes.

Summit CLO 2026-2 is a static-to-reinvesting broadly syndicated loan CLO issued by Summit CLO 2026-2, Ltd., with Summit CLO 2026-2, LLC as co-issuer. The transaction closed on June 11, 2026, with an effective date of June 30, 2026, and is denominated in U.S. dollars. The target initial collateral balance and initial capitalization are both \$520,000,000, comprising rated and subordinated interests. The legal final maturity is June 2041, with a 15-month non-call period and a 36-month reinvestment period from the effective date. Payments are made quarterly on March 20, June 20, September 20 and December 20, subject to applicable business-day conventions.

1. Parties and Governance

Transaction parties

Granite Peak Capital Management acts as collateral manager and investment manager. It is responsible for sourcing, selecting, monitoring, purchasing, selling and substituting collateral within the investment guidelines. The manager's authority is broad enough to permit active portfolio management but remains subject to eligibility criteria, concentration limitations, collateral-quality tests and coverage tests.

Wellsbridge Trust Company, N.A. acts as trustee. The trustee maintains transaction accounts, applies available proceeds under the applicable waterfalls, distributes payments and performs other administrative and fiduciary functions.

Wellsbridge Collateral Services, LLC acts as collateral administrator and supports collateral-level data processing, reconciliation and investor reporting. **First Meridian Bank, N.A.** acts as calculation agent and paying agent. **Crestline Securities LLC** acts as placement agent and arranger.

The fictional transaction is intended to receive ratings from **S&P Global Ratings** and **Moody's Ratings**. Legal counsel is **Hawthorne & Vale LLP**. **BlueRock Custody Services, Inc.** serves as custodian.

Granite Peak Capital Management handles portfolio management, trading, reinvestment and monitoring; Wellsbridge Trust Company, N.A. serves as trustee and handles account and payment administration; Wellsbridge Collateral Services, LLC provides collateral administration and reporting support; First Meridian Bank, N.A. acts as calculation and paying agent; BlueRock Custody Services, Inc. provides custody of specified assets and documents; Crestline Securities LLC serves as placement agent and arranger; Hawthorne & Vale LLP provides transaction legal counsel; and S&P Global Ratings and Moody's Ratings serve as rating agencies.

2. Capital Structure

The capital structure uses five rated classes and a subordinated interest. Class A-1 is the most senior rated class. The Class E Notes provide a junior layer of rated subordination above the subordinated interests.

Class	Principal amount	Rating	Coupon / spread	Priority	Approx. subordination
---	---	---	---	---	---
Class A-1 Notes	\$312,000,000	AAA	SOFR + 1.72%	First	40.0%
Class A-2 Notes	\$41,600,000	AA	SOFR + 2.18%	Second	32.0%
Class B Notes	\$36,400,000	A	SOFR + 2.70%	Third	25.0%
Class C Notes	\$31,200,000	BBB	SOFR + 3.45%	Fourth	19.0%
Class D Notes	\$26,000,000	BB	SOFR + 5.10%	Fifth	14.0%
Class E Notes	\$20,800,000	B-	SOFR + 7.25%	Sixth	10.0%
Subordinated Notes	\$52,000,000	NR	Residual	Last	Residual

The rated notes collectively total \$468.0 million. The subordinated notes total \$52.0 million, producing initial capitalization of \$520.0 million. The transaction therefore has a 10.0% subordinated interest component relative to initial capitalization.

3. Interest and Principal Terms

Interest mechanics

The rated notes bear interest by reference to three-month term SOFR plus the applicable class spread. Interest accrues over quarterly interest periods and is calculated using an Actual/360 day-count convention. If the reference rate becomes unavailable, the transaction documents provide for a designated replacement benchmark and related fallback mechanics.

Interest is generally payable on each scheduled payment date. If available interest proceeds are insufficient and a class is subject to a permitted deferral mechanism, unpaid amounts may be carried forward in accordance with the governing documents. Such deferral does not change the contractual priority of the affected note.

Principal mechanics

During the reinvestment period, principal collections may be reinvested if the proposed investment satisfies the reinvestment criteria and does not cause applicable tests to fail. After the reinvestment period, principal proceeds are generally directed sequentially to the rated notes, beginning with the most senior outstanding class.

4. Collateral Portfolio

Initial portfolio characteristics

At the effective date, the collateral pool is expected to contain approximately 207 obligors and 286 individual loan positions. The portfolio emphasizes first-lien senior secured loans but permits limited exposure to other asset types.

The initial collateral balance is \$520,000,000, comprising 207 obligors and 286 loans, with an average loan position of \$1,818,182. The largest obligor represents 1.80% of the portfolio. The portfolio is 91.0% senior secured, including 88.0% first-lien and 3.0% second-lien assets, with 1.0% unsecured assets. Floating-rate assets account for 96.0% and fixed-rate assets for 4.0%. The weighted average spread is 3.86%, weighted average coupon is 7.94%, weighted average rating is B+/B1 equivalent, weighted average maturity is 6.0 years, and weighted average life is 4.8 years. The expected recovery assumption is 64.0%, current-pay assets account for 98.2%, CCC/lower-rated exposure is 4.4%, and the Diversity Score is 73.

The portfolio is geographically concentrated in North America but includes smaller exposures to Western European borrowers where permitted. The largest industry exposure at the effective date is Health Care Services at 12.6%, followed by Software & Services at 11.8% and Business Services at 10.9%.

Industry and geographic mix

The portfolio exposure is diversified across several industries, with Health Care Services accounting for 12.6%, Software & Services 11.8%, Business Services 10.9%, Chemicals 9.1%, Media & Telecommunications 8.4%, Manufacturing 8.1%, Consumer Products 7.7%, Transportation & Logistics 6.9%, and Other industries 24.5%.

Approximately 87% of the collateral is linked to U.S. borrowers, 8% to Canadian borrowers and 5% to Western European borrowers. Geographic exposure is measured using the transaction's designated jurisdiction methodology rather than the location of a borrower's administrative agent.

5. Collateral Eligibility Criteria

Eligible obligations

Eligible collateral generally consists of corporate loan obligations, including first-lien term loans, permitted second-lien loans, revolving credit interests and certain participation interests. An asset must have a maturity that does not extend beyond the legal final maturity and must satisfy the transaction's minimum spread, currency and credit requirements.

The minimum permitted spread for a floating-rate loan is generally 1.75% over the applicable reference rate. The manager may acquire fixed-rate assets only within the fixed-rate concentration limit. Defaulted obligations may be acquired only where specifically permitted and may be subject to valuation adjustments.

Eligibility parameters

Criterion	Summit CLO 2026-2 requirement
---	---
Permitted primary currency	USD; CAD and EUR subject to conversion and concentration rules
Maximum asset maturity	No later than legal final maturity, subject to permitted extensions
Minimum floating spread	1.75%
Minimum purchase price	65.0, subject to asset-specific rules
Maximum purchase price for discounted obligations	100.0 unless otherwise permitted
Second-lien limit	5.0%
Unsecured limit	2.0%
Fixed-rate limit	7.5%
CCC / lower-rated limit	7.0%
Delayed-draw limit	4.0%
Revolving commitment limit	8.0%
Defaulted obligation limit	3.0%

6. Concentration Limitations

The concentration framework is intended to prevent the collateral pool from becoming excessively dependent on a single borrower, industry, jurisdiction or asset type. A proposed trade can be an eligible investment and still be prohibited because it would cause a concentration limit to be exceeded.

The concentration limits are 2.25% for a single obligor and 9.00% for the top five obligors combined. The largest industry is capped at 14.00%, geographic jurisdiction at 18.00%, second-lien assets at 5.00%, unsecured assets at 2.00%, fixed-rate assets at 7.50%, CCC/lower-rated assets at 7.00%, current-pay CCC assets at 5.00%, long-dated obligations at 12.00%, and delayed-draw obligations at 4.00%.

A concentration breach generally restricts additional purchases that would worsen the breach. The manager may be permitted to sell or substitute assets to restore compliance, with cure mechanics depending on the particular test.

7. Collateral Quality Tests

The manager monitors portfolio quality using weighted average spread, weighted average life, diversity, rating measures and recovery assumptions. The transaction uses a **Weighted Average Rating Factor (WARF)** ceiling of 3,120, a minimum weighted average spread of 3.55% and a maximum weighted average life of 5.75 years during the reinvestment period.

Quality measure	Requirement	Initial value	Status
---	---	---	---
WARF	≤ 3,120	2,964	Pass
Weighted Average Spread	≥ 3.55%	3.86%	Pass
Weighted Average Life	≤ 5.75 years	4.80 years	Pass
Diversity Score	≥ 65	73	Pass
CCC / lower-rated exposure	≤ 7.00%	4.40%	Pass
Expected recovery	≥ 60.0% target	64.0%	Pass

These measures are evaluated using the transaction's specified calculation conventions. The initial values are illustrative point-in-time measurements and can change as collateral is purchased, sold, repaid, upgraded, downgraded or otherwise modified.

8. Coverage Tests

Overcollateralization and interest coverage

The Transaction uses OC and IC tests to protect the more senior classes. The OC ratios compare the relevant collateral balance with the specified note balances, while IC tests compare available interest proceeds with required interest obligations.

Test	Required threshold	Illustrative initial value	Cushion
Class A OC	129.0%	133.6%	4.6%
Class B OC	119.0%	123.4%	4.4%
Class C OC	111.0%	114.8%	3.8%
Class D OC	105.0%	108.2%	3.2%
Class A IC	150.0%	161.7%	11.7%
Class B IC	135.0%	146.9%	11.9%

The tests are measured on each payment-date calculation date and at other times specified by the transaction documents. If a test fails, available cash can be redirected away from junior classes until the applicable deficiency is cured. The exact diversion amount depends on the failed test and the waterfall provisions.

9. Interest Diversion Test

Diversion mechanics

The Interest Diversion Test is measured on each payment date during the reinvestment period. For Summit CLO 2026-2, the required Interest Diversion Test level is **105.0%**. The calculation compares the adjusted collateral principal balance and applicable liabilities using the transaction-specific methodology.

If the test is below the required level, a portion of interest proceeds otherwise distributable to the subordinated interests can be diverted to purchase additional collateral or otherwise increase collateral enhancement, subject to the governing documents. The diversion continues until the test is cured or the applicable payment-date conditions cease to require diversion.

10. Principal Waterfall

Principal proceeds include principal repayments, sale proceeds treated as principal and other principal collections. During the reinvestment period, principal proceeds can be used for permitted reinvestments.

After the reinvestment period, available principal is generally applied sequentially to the rated notes, beginning with Class A-1 and then moving through the capital structure. Principal distributions to subordinated interests are residual and occur only after higher-ranking obligations have been satisfied.

Following an event of default or certain optional redemption events, the principal waterfall can operate under a different priority. The post-default provisions are designed to preserve the relative priority of the note classes while enabling enforcement and liquidation of collateral.

11. Reinvestment Mechanics

Trading during the reinvestment period

The reinvestment period runs from June 30, 2026 through June 30, 2029, subject to the transaction's stated termination conventions. During this period, the manager may reinvest principal proceeds in eligible collateral and may sell assets for permitted reasons.

Permitted trading includes replacing an asset with another eligible asset, improving portfolio quality, managing concentration, responding to borrower events and maintaining compliance with collateral tests. A trade cannot be evaluated solely on spread: the manager must also consider maturity, rating, diversity, industry exposure, asset type and the effect on coverage tests.

Post-reinvestment period

After June 30, 2029, ordinary reinvestment generally ceases. Limited sales and substitutions can continue where permitted, but principal collections are principally directed toward deleveraging. The manager may still be required to dispose of assets to address defaults, concentration breaches or other specified events.

12. Redemption, Refinancing and Reset

The non-call period is 15 months from the closing date. After the non-call period, the subordinated interests may, subject to required conditions, direct an optional redemption or refinancing of the rated notes.

A clean-up call may be exercised if the aggregate collateral principal balance falls below **10% of the original collateral balance**, provided the other contractual conditions are met. Refinancing or repricing may require specified noteholder consents and satisfaction of applicable economic and documentation conditions.

A reset transaction may extend the reinvestment period or modify selected economic terms if the required classes approve the transaction. The rights of the subordinated interests are subject to the voting and conflict provisions of the governing documents.

13. Fees and Expenses

The management fee is paid according to the interest waterfall and is subject to the fee provisions in the governing documents. Certain expenses can receive senior priority even when the transaction's collateral performance is weak.

The base management fee is 0.35% per annum on the collateral principal balance. The trustee fee is 0.045% per annum, subject to a minimum annual fee, while collateral administration is charged at 0.025% per annum. The calculation agent fee is \$32,500 per year plus specified extraordinary charges, and custody is charged at 0.015% per annum. Rating expenses are payable at cost, as are legal expenses subject to transaction budget controls. Placement expenses are payable as agreed in the closing documents, while extraordinary expenses are payable according to the priority-of-payments provisions.

14. Manager Powers and Restrictions

Investment authority

Granite Peak Capital Management may acquire, dispose of, substitute and reinvest collateral, negotiate amendments and exercise specified rights relating to collateral assets. The manager must apply reasonable procedures for eligibility, valuation and compliance monitoring.

Restrictions and conflicts

The manager may not knowingly acquire prohibited investments or cause the portfolio to exceed applicable concentration limits. Conflicts can arise when the manager manages multiple accounts that could transact in the same asset. The transaction therefore includes allocation and conflict-management provisions.

Manager termination or replacement can occur following specified events, including certain material breaches, insolvency events or persistent failures to perform required obligations. Replacement rights are subject to the voting thresholds and eligibility requirements specified for a replacement manager.

15. Events of Default and Remedies

Events of default may include failure to pay required amounts when due, insolvency of the issuer, specified breaches of transaction documents, and other contractual defaults.

Following an event of default, the trustee may exercise remedies available under the governing documents, potentially including acceleration of the notes and enforcement against the collateral. Eligible noteholders may have specified rights to direct or consent to trustee action.

After acceleration, proceeds from collateral liquidation are distributed under the applicable post-default waterfall. Subordinated interests generally remain last in priority and can suffer a complete loss before senior classes are impaired.
